

I'm not robot

Continue

2 3 is the light @zero voltage opened with 3 way switch. He told me that without any voltage the light @ is unusual with switching on it. We have changed all THELed lights on & after dark light come on the mind with these two lights. Where is the voltage coming from? Dean Harmon (author) Boise, Idaho on July 04, 2017: Looks like you lost the connection when you added new light. Check all your connections again and make sure that some wires don't come out of the vent. If you want to switch to control the new lights, then they should be attached to the same wires which was the old light. Brian Egan on June 30, 2017: can y'all help with a 4-way switch problem? A switch with 3 switch after the electric light is a reality (I know old fashioned) and I added that the first thing to stop hot and neutral is 4 additional light fix-and now just 2 of 3 switch lights can control 3rd switch not exactly AC a head-scratfor for me-I double check what all my connection-y'all any of my problems are? Dean Harmon (author) from Boise, Idaho in June 21, 2017: Look for loose connections, the breaker closed and the bulb burned out. Test with a meter that you have power on each switch, given that the previous switch is changed (on no real as test, flip switch and re-test). And finally, check again that everything is wired right -it's pretty easy anywhere in a set of 3 and 4 way switches. Andy on June 21, 2017: How you said How can I wired and the switch will still not work from any other Sigstoonsdan Harmon (author) from Boise, Idaho on May 23, 2011: I never thought but yes, understanding the logic of a 4-way switch system would be a great way to start learning about control and logic circuits. By Teresa Schultz in East London, In South Africa May 23, 2011: I'm worried-but she'll come hand in hand to learn about electric circuits and show my boys when they were switching to school last year! Good information, and well explained. I explained.
